

Information for foreign residents
in Hyogo

To those who have reserved for or received COVID-19 vaccination

COVID-19 vaccination can cause side effects such as allergic reactions.
Monitor your physical condition after receiving vaccination.

◆ Symptoms that may appear within a few days after vaccination

Pain and swelling of
the injection site

Muscle pain, joint pain

Headache

Tiredness, chills, fever

Most symptoms will go away within a few days after vaccination. If you have persisting symptoms, please consult a doctor.

◆ Symptoms that may appear within 30 minutes after vaccination

In rare cases, serious allergic reactions (anaphylaxes) may occur.

Itchiness around
the injection site

Dizziness,
cold sweat

Headache,
vomiting

If you experience such symptoms at the vaccination site, please inform the staff.

Palpitation

If you have any troubles regarding side effects, please contact the professional consultation service (details are on the back).
